TITLE OF THE PROJECT:

Future Wave

Our intention is to create a platform which helps the students to choose a better field for their career after completing their schooling . This application gives the details or information about all UG courses in science , arts and medicine. The details will be included are...the trending technologies in present, the future scope of the course, better institution for the particular course, average LPA and maximum LPA for the particular course in particular institution, specialized foreign institutions for more opportunities in future....These days students are bit confused about choosing their career. If the student is in a intension of choosing computer science field, but still confused about choosing department in computer science field.. this application helps them by giving a clear definition about the field they wanted to choose. This is the identical case in every field. The information which is uploaded will be updated frequently according to the day to day updates. This helps the students to choose about their career in a wise manner without getting demented. In this application the courses are partly separated according to their division. So it will be quite peaceful for the students to choose the choices. Finally this the entire theme of our project.
