TITLE OF THE PROJECT:

Future wave

PROBLEM STATEMENT:

In recent years the 12 students are facing a lot of difficulties on choosing their major. And most importantly students aren't clear with their choices. So to resolve these problems we are here with our own ideas to develop a solution.

ABSTRACT:

Our idea is to develop a app that can be able to access by the students who are pursuing their schooling and stepping into their UG. Our app provides all the necessary information about each and every field in science, medicines and arts.

The app will be more helpful on filtering your ideas on how to pursue your carrier and displaying the technologies that are on trend and the maximum salary that can be acquired from that particular field.

EXPECTED RESULT:

From the above extract we can conclude that the students who doesn't yet have an idea to what to do or what their the respective major leads them to, can have an clear idea of where their choices can take them to and what they have to do to succeed on their respective choices.
